

How to install and replace the iRV31 to the iRV32 power harness.

1. The original iRV31 power harness only has 2 lead wires, Red for battery and black for ground please see attached for picture
2. The iRV32 has 4 lead wires, red for ignition, yellow for battery, black for ground and optional blue for external amplifier turn on. Please see attached for picture.
3. When replacing the current iRV31 harness simply cut the red wire from the harness.
4. Take the new iRV32 harness by combining the red and yellow together and connecting it to the original iRV31 red wire.
5. Cut the original black wire from the iRV31 and combine it with the new iRV32 black wire.
6. Tape or cut the blue wire and do not use. (option for external amplification)
