Note

When any button is pressed, the display screen turns on. If no button is pressed for 30 seconds, the display screen turns off.

Setting up your refrigerator

Before using your refrigerator

- 1 Remove the interior packing.
- 2 Let the refrigerator stand upright for approximately four hours before connecting it to power. This reduces the possibility of a malfunction in the cooling system from improper handling during transportation.
- 3 Wash the inside with a damp warm cloth soaked in a solution of one quart of lukewarm water to two tablespoons of baking soda.
- 4 Wait for approximately 24 hours after the thermostat has been set before placing any food in your refrigerator.
- 5 Wait for approximately two hours after moving the unit for the coolant fluid to settle.

Finding a suitable location

- This refrigerator is designed to be free standing only.
- Place your refrigerator on a floor that is strong enough to support the refrigerator when it is fully loaded.
- Locate the refrigerator away from direct sunlight because it may affect the acrylic coating and heat sources may increase electrical consumption. Ambient temperature below 50°F (10°C) or above 85°F (29.4°C) will hinder the performance of this refrigerator. This refrigerator is not designed for use in a garage or any other outside installation.
- Avoid locating the refrigerator in moist areas.

Leveling your refrigerator

- It is very important for the refrigerator to be level. If the refrigerator is not leveled during installation, the doors may not close or seal properly, causing cooling, frost, or moisture problems.
- To level your refrigerator, rotate the leveling feet clockwise to raise the refrigerator or counter-clockwise to lower it.

Note

Having someone push against the top of the refrigerator helps to take some weight off the leveling foot, making it easier to adjust.

Providing proper ventilation

The refrigerator does not require any clearance on the sides or back to ensure proper airflow to the compressor. Do not place the refrigerator near any heat sources, such as a heater or stove, as this may put a strain on the compressor.

Providing a proper power supply

Check your local power source. This refrigerator requires a 110V-120V, 60Hz power supply.

Use a receptacle that accepts the grounding prong. The power cord is equipped with a 3-prong (grounding) plug which mates with a standard 3-prong (grounding) wall outlet to minimize the possibility of electric shock hazard from this refrigerator.

Using a 3-prong plug and outlet

Using a grounding adapter

Notes

- The refrigerator should always be plugged into its own individual electrical outlet which has a voltage rating that matches the rating plate.
- Never unplug your refrigerator by pulling on the power cord. Always grip the plug firmly and pull straight out from the outlet.

Installing the freezer drawer and refrigerator door handles

- 1 Unplug the refrigerator.
- 2 Identify the handles. Lay all four on a flat surface. The refrigerator door handles extend lower than the freezer drawer handles.

- 3 Screw the extended-head screws into the drawer/door holes with the wrench provided. Do not overtighten. The screw heads should extend above the surface of the drawer/door.
- 4 Place the drawer/door handle over the heads of the screws.
- 5 Install the remaining two screws into the holes on the handle, then tighten them securely.

Adjusting the refrigerator doors

The refrigerator must be level in order for the doors to be perfectly even.

If the doors are uneven, first try leveling the freezer. See “Leveling your refrigerator” on page 10. If the doors are still uneven, raise the uneven door, then use a pair of pliers to insert the supplied fastener-ring in the gap between the hinge-grommet and the lower hinge. The number of fastener-rings needed depends on the gap.

Connecting the ice-maker

Connecting to the cold water supply line

- 1 Shut off the main water supply line and turn the ice-maker off.
- 2 Locate the nearest cold water line (potable water only).
- 3 Install the shut off valve based on instructions provided in the water line installation kit.

- 4 After connecting the water valve to the water line, turn your main water supply back on, then turn on the shut off valve and flush several gallons of water to clear the water supply line.
- 5 Turn off the shut off valve.

Connecting the water supply to the refrigerator

- 1 Connect the water supply tubing to the valve you installed in the water line.
- 2 Connect the other end of the water supply tubing to the water connector on your refrigerator.

- 3 Turn water on and check for any leakage.

Installing the decorative cover for the bottom beam

- Install the bottom decorative cover using the three screws provided.

Using your refrigerator

Notes

- If the refrigerator is unplugged or loses power, you must wait three to five minutes before restarting it. If you attempt to restart before this time delay, the refrigerator will not start.
- Large amounts of food will lower the cooling efficiency of the refrigerator.
- If you choose to change the thermostat setting, adjust it by one increment at a time. Allow 24 hours for the temperature to stabilize between adjustments.

Plug in your refrigerator. Wait for 30 minutes, then open the door to determine if the refrigerator is working properly.

Locking and unlocking your refrigerator

To activate the child-proof lock, press the **CHILD LOCK** button for three seconds. The CHILD LOCK indicator turns on and the control panel is locked. To unlock, press and hold the **CHILD LOCK** button for three seconds. The CHILD LOCK indicator turns off and the control panel unlocks.

These functions (below) can only be performed while in the Unlocked state.

Switching between Fahrenheit and Celsius

To toggle between Celsius and Fahrenheit display, press and hold the **AUTO MODE** button for three seconds.

Setting the refrigerator temperature

- 1 Press the **REF. TEMP.** button. The refrigerator temperature display turns on.
- 2 Press the **REF. TEMP.** button repeatedly until the desired temperature is displayed. The temperature range is 34° to 44° F (1° to 7°C).

Setting the freezer temperature

- 1 Press the **FRZ. TEMP.** button and the freezer temperature display turns on.
- 2 Press the **FRZ. TEMP.** button repeatedly, until the desired temperature is displayed. The temperature range is 9° to -8° F (-13° to -22° C).

Using the ice-maker

- To turn the ice-maker on, press the **ICE-MAKER ON/OFF** button. The ICE-MAKING indicator turns on and the ice maker starts. It will take 2-4 hours to make ice, depending on the room temperature. It may take longer the first time it is used. The ice maker checks the ice level automatically and stops making ice when the ice bin is full.
- To turn the ice maker off, press the **ICE-MAKER ON/OFF** button again. The ICE-MAKING indicator turns off.

Notes

- Under normal conditions, the ice-maker capacity is 2.86 lbs. (1.3 kg). The capacity can change depending on how often the door is opened and closed.
- Ice cubes may stick together or get crushed.
- If the ice-maker isn't going to be used for a long period, see "Removing, cleaning, and reinstalling the ice maker" on page 22.

Fast-cooling mode

Fast-cooling mode is used to counteract a sudden rise in the temperature of the refrigerator, such as when a large amount of food is placed into the refrigerator. The fast-cooling mode causes the compressor work for longer cycles to maintain the desired temperature.

To activate fast-cooling mode, press and hold the **REF. TEMP.** button for three seconds. The SUPER COOL indicator turns on. This deactivates all other refrigerator modes. When the temperature of the refrigerator compartment reaches the set temperature, fast-cooling mode turns off.

To manually de-activate fast-cooling mode, either:

- Activate the Energy-Saving or AUTO mode, or
- Press the **REF. TEMP.** button to adjust the temperature, or
- Press and hold the **REF. TEMP.** button for three seconds.

Fast Freezing

The fast freeze mode lowers the temperature below the normal operating temperature to quickly freeze foods. Press and hold the **FRZ. TEMP.** button for three seconds. The SUPER FRZ. indicator turns on.

Turning on the Fast Freeze mode deactivates the Auto and Energy Saving modes.

Auto mode

This mode sets the refrigerator temperature to 41° F (5° C) and the freezer temperature to 0° F (-18° C). If the refrigerator compartment is turned off, the auto mode will still be in effect for the freezer compartment.

Press the **AUTO MODE** button. The AUTO indicator turns on. Selecting AUTO MODE automatically de-activates all other modes.

To de-activate AUTO MODE, either select another mode, or press the **REF. TEMP.** or **FRZ. TEMP.** button.

Energy saving mode

To save energy, this mode sets the refrigerator temperature to 44° F (7° C) and the freezer temperature to 5° F (-15° C).

Press the **ENERGY SAVING** button. The ENERGY SAVING indicator turns on and all other modes are disabled.

To manually de-activate the Energy Saving mode, either:

- Activate another mode, or
- Press the **REF. TEMP.** or **FRZ. TEMP.** button, or
- Press the **AUTO MODE** button.

Turning off the refrigerator compartment

When the refrigerator compartment will remain empty for a long period of time, the refrigerator compartment can be turned off (the freezer compartment stays on).

To turn off the refrigerator compartment, press and hold the **ENERGY SAVING** button for three seconds. The refrigerator compartment icon turns off and the OFF icon turns on. The refrigerator temperature display read shows "--".

To turn the refrigerator compartment back on, press and hold the **ENERGY SAVING** button for three seconds. The refrigerator compartment icon turns on, the OFF icon turns off, and the refrigerator temperature display returns to normal.

Adjusting the cantilever rack

The cantilever rack can be adjusted to different heights.

- 1 Raise the rack, then take it out by tilting it upward.
- 2 Insert the top leg into a slot on the bracket, then insert the bottom leg into a slot on the bracket.

Adjusting the door-mounted bottle rack

Raise the bottle rack evenly with both hands, then pull out to remove it. Reinsert it in the reverse order at the height you want.

Maintaining your refrigerator

Your refrigerator is designed for year-round use with only minimal cleaning and maintenance.

When you first receive it, wipe the cabinet with a mild detergent and warm water, then wipe dry with a dry cloth. Do this periodically to keep your refrigerator looking new.

Caution

To prevent damage to the finish, do not use:

- Gasoline, benzene, thinner, or other similar solvents.
- Abrasive cleaners.

- 1 Turn off the refrigerator and unplug it from the wall outlet.
- 2 Remove all food.
- 3 Wash the inside with a damp warm cloth soaked in a solution of one quart of lukewarm water to two tablespoons of baking soda solution.
- 4 Be sure to keep the door gasket (seal) clean to keep the refrigerator running efficiently.
- 5 Dry the interior and exterior with a soft cloth.

Note

If the interior LED light should require changing, contact Customer Service to have it replaced.

Removing the big drawer

- 1 Pull out the big drawer until it stops.
- 2 Locate the hooks on the left and right sides of the drawer bottom.

- 3 Grip the hook with needle nose pliers or tweezers and push it up, then remove it from the groove in sliding rail. Remove the hook on the other side using the same method.
- 4 Remove the drawer.
- 5 Install the drawer by reversing this process.

Removing the lower freezer drawer

- 1 Pull out the lower freezer drawer until it stops.

- 2 Press the buttons in both slots at the same time, then pull out the freezer drawer until it stops again.

- 3 Lift the drawer off the rails and remove it.

- 4 Reverse this procedure to reinstall the drawer.

Removing, cleaning, and reinstalling the ice maker

If the ice maker isn't used for a long period of time, the ice cubes that are produced might have unpleasant smell. You must take out and clean the ice maker.

- 1 Turn the dial to the Unlocked position, then pull to remove the ice maker.

- 2 Rinse the ice maker in clean, warm (not hot) water (don't use detergent).
- 3 Air dry the ice maker completely, otherwise water droplets in the ice maker might cause it to function abnormally.
- 4 Insert the ice maker onto the ice maker and rotate to the Locked position.

Defrosting the freezer

This refrigerator is frost free, so you don't need to defrost it. You just need to clean it periodically, following the above instructions.

Shutting down your refrigerator - long vacations (several months)

- 1 Turn off the refrigerator and unplug it from the wall outlet.
- 2 Remove all food.
- 3 Clean the refrigerator.
- 4 Leave the door open slightly to avoid possible formation of condensation, mold, or odor.

Caution

Use extreme caution with children. The refrigerator should not be accessible to child's play.

Moving your refrigerator

- 1 Turn off the refrigerator and unplug it from the wall outlet.
- 2 Remove all food.
- 3 Securely tape down all loose items inside your refrigerator.
- 4 Tape the doors shut.
Be sure the refrigerator stays in the upright position during transportation.

Removing and installing the ice maker

When the ice maker isn't going to be used, you can remove it and use the the space as a part of the freezer compartment.

- 1 Turn the ice maker off.
- 2 Open top freezer drawer.

- 3 Pull the ice-maker out (1) then downwards, so that the ice maker is unhooked (2).

- 4 Pull down the ice maker's power plug so that it is detached from the ice maker's power socket (3), then remove the ice maker.
- 5 Reinstall the big drawer and close it.
- 6 To reinstall, reverse this procedure, then turn the ice maker on.

Tips on saving energy

- Locate your refrigerator in the coolest area of the room, away from heat producing appliances or heating ducts and out of the direct sunlight.
- Let hot foods cool before placing them in the refrigerator. Overloading the refrigerator forces the compressor to run longer. Foods that freeze too slowly may lose quality or spoil.
- Wrap foods properly and wipe containers dry before placing them in the refrigerator. This cuts down on frost build-up inside the refrigerator.
- Organize and label food to reduce door openings and extended searches.

Tips on storing food

- You cannot store a gallon of milk in the refrigerator unless you lower the top shelf so far that the bottom shelf becomes unusable. We suggest purchasing two half gallons and storing them in the door.
- Do not store food which goes bad easily at low temperature, such as banana, and melon.
- Allow hot food to cool prior to storing. Placing hot food in the fridge-freezer could spoil other food, and lead to higher electric bills.

- When storing food, use a container with a lid whenever possible. This prevents moisture from evaporating, and helps food to keep its taste and nutrients.
- Do not block air vents with food. Smooth circulation of cold air keeps the refrigerator and freezer temperatures even.
- Do not open the door frequently. Opening the door lets warm air enter the unit, and can cause the temperature to rise.
- To adjust the temperature control easily, do not store food near the temperature control dial.
- Never keep too many foods in the door rack, as this may stop the door from fully closing.
- Do not store bottles in the freezer compartment - they may break when frozen.
- Do not refreeze food that has been thawed. This causes a loss of taste and nutrition.
- Frozen foodstuffs should be stored packed (in polyethylene film, aluminum foil, etc.) in the freezer compartment.

The light-wave freshness lamps in the crispers

This feature uses light waves to promote and extend photosynthesis, in order to preserve fruits and vegetables.

The light-wave freshness lamps turn on when the refrigerator door is opened. The lamps turn off when the door has been open for one minute or more. After the refrigerator door is closed, the lamps cycle on for 10 minutes, then turn off for five minutes.

Troubleshooting

Caution

Do not try to repair your refrigerator yourself. Doing so invalidates the warranty.
